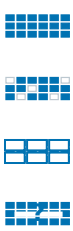
AI readiness is a testable research question.

Which dataset properties predict reliable scientific use for a stated task and learning method?

01 Vary the corpus



- Native / minimally enhanced
- Coverage and rare conditions
- Resolution and compression
- Metadata and provenance

Controlled changes; rights preserved.

02 Hold experiment fixed

Reference learning + task
Same architecture, training and task

HELD-OUT EVALUATION
Events / regions / times
Prespecified partitions

Prevent leakage across splits.

03 Measure consequences

- **Performance + transfer**
  Accuracy, transfer, reproducibility
- **Uncertainty + failure**
  Missing support, failure modes
- **Appropriate abstention**
  Recognize inadequate evidence

EVIDENCE-BASED, TASK-SPECIFIC READINESS PROFILES
Revise hypotheses and corpus design using independent evidence.

CONCEPTUAL DRAFT | Oct 20, 2026 | Experimental design; no performance results implied.
